

Plant engineering and construction

Professional plant engineering and construction requires the practical experience and Know-How of many years. Together with our experienced specialists in project work and implementation we have built and modernised industrial plants. On request we also take on project management and on-site monitoring. In our international plant construction projects we co-operate with local partner organisations and engineering companies.

Scope of supply and services:

- Practical planning and project management of plants
- Project leader for automation systems
- Construction of control cabinet and control systems
- Installation for electrical- and control systems
- Additional work
 - Pipework
 - Steel construction
 - Machineries
